Yeşilmeşe Tarım,

was established in 1998 as a family business in Adana. Yeşilmeşe Tarım, which is at an important point in growing fresh vegetables and fruits, has a production area of 500 decares with the cultivation of melons and watermelons in the first years of its establishment, followed a continuous development vision by using the power and experience from the past, increasing its product variety day by day and expanding its quality and commercial volume.

By 2021, it has significantly increased its current production capacity and product range without losing its quality. For now, it has reached a production area of 11000 decares by adding citrus varieties, potatoes, onions and tomatoes to the product list. Our company, which produces agricultural products as its main activity, has two separate business areas. One of them is located in Tarsus / Mersin and the other is in Ereğli / Konya. In addition, in 2014, we added a new one to its product chain with seed potato production. We keep these potatoes in our natural warehouse during winter months. Thus, a different dimension has been formed in the vision and mission of our company. One of our goals is to be a pioneer in potato seed cultivation.

All agricultural products produced within our company, including our certified potato seeds, are all within the scope of good agricultural practices. In order to produce better quality, we continue our R&D studies day by day, thus we aim to contribute to humanity and the national economy.

In the future as it is far from Yesilmese agricultural organizations in the form of direct contact with Turkey around the supermarket chains and customers healthy and safe marketing network will continue to deliver increasing their product. As Yeşilmeşe Tarım, our goal is to create a vision in the international market.

"Discover the natural flavor, eat healthy."

Fruits & Vegetables

Fruits

LEMON

Küt Diken

Lemon saplings, which are resistant to lime, are suitable for pile root. Lemon saplings, which are frequently used in the Mediterranean region, are preferred by the producers for their easy growth, protection against many external factors and long life.

Mayer

The tall leaves of the tree are dark bright green. Its fruit is rounder and smaller than other varieties. The skin color is bright yellow that plays orange. The skin is thin and soft. It can contain 8-10 seeds per fruit. It has a high amount of water.

Fruits

MANDARIN

Although its origin is not known exactly, it is thought to be Morocco. It should not be confused with the other variety, Murcott (Honey). The peel is reddish orange, the interior is bright orange. It is a type of tangerine that ripens at the end of the season (ripens during February-March). It has a unique aroma and is a very sweet variety.

W Murcott

It is a fruit originating in Japan. It takes its name from a state here. It reached America and Europe in the 19th century. Its trees have a flat crown and few leaves. It is generally known as Rize Mandarin in the Mediterranean region. It is an early variety. It is an efficient variety suitable for storage and transportation. The skin is thin and easily peeled. It has high quality taste and smell. It is seedless. Harvest is at the end of September and the beginning of October.

Rize

Dobashi Beni fruit, which has a round shape, is seedless and has an orange flesh color. Puffing is almost never seen in this fruit type. It is less likely to give fruit again at the same yield time. Dobashi Beni tangerine ripens in October and is harvested in November.

Dobashi Beni

Its trees are strong. It is one of the earliest varieties of mandarins. Fruits are quite large and flat. It is seedless, easily peeled and sweet. Planting of Okitsu as early Satsuma has increased. It is 2 weeks earlier than Satsuma. It is suitable for storage.

Fruits

ORANGE

Fukumoto

Although it looks like Washington, it is much earlier. It is a positive feature that it is very resistant to cold. Fruits are very smooth round shaped and dark reddish color increases its attractiveness. It has an important place among early oranges with its color and earlyness.

Washington

It forms the basis of the navel orange group. Tree crown is round and medium-sized, trees are medium strong and well developed. It is a medium early variety. Its fruits are sweet, aromatic, delicious and seedless. It is the most demanded variety in both domestic consumption and export among the table oranges.

GRAPEFRUIT

Star Ruby

Derived from Hudson grapefruit. Fruits are large and smooth peeled. It has a pinkish orange crust color and causes red cheeks in certain areas. The flesh is red. It has few seeds. Towards the end of the season, the acidity level decreases. The fruit can last for a long time on the tree without being harvested.
